

"The World is Listening!"

World Christian Broadcasting Prepares to Cover the World with the Gospel

—Three 100,000 Watt Transmitters Ordered—

Mesquite, Texas, is an important place at this time for the work of World Christian Broadcasting. It is at the Continental Electronics Corporation in Mesquite, Texas, that our three **100,000 watt transmitters** are being built. Once they are built and tested, they will be shipped to the site of the new station in the Indian Ocean. They will power nine acres of wire hanging in the air and will daily cover **Africa, South America, the Middle East, India, Indonesia, the European part of Russia, and the southern and eastern sections of China with the gospel.**

The new antennas will be digital ready, which means the sound will be FM quality. In addition to the three large antennas, a one directional antenna will cover the countries in the Indian Ocean. With all of these antennas, we will have the ability to do four broadcasts simultaneously.

From Station KNLS, in Alaska, about **2/3 of Russia and China** and countries in the **Pacific Rim** for the last 24 years have had access to the good news of Jesus. Every day, **twenty hours of broadcasting** is heard in the Russian, Chinese and English languages. Listeners have responded to us literally from the entire world. Between the two stations, the gospel will be available to almost **5 billion people** everyday.

We can partner with your missionaries now positioned throughout the world who can assist listeners desiring further study and contact. Let's meet and see how we can work together more closely. The mighty hand of God is opening doors of opportunity to reach those even in the remotest areas of the world with the gospel.

Be prayerful about the new station.
